Professional Summary

Software engineer with 3 years building production applications, including LLM chatbots, voice assistants, and workflow automation. Founding engineer on CurerTech, a multi-tenant healthcare platform, owning its AI services, Next.js/React frontend, backend APIs, and AWS infrastructure in a HIPAA-regulated environment.

Skills

AI & Generative AI: LLM Application Development, Chatbots & Conversational AI, Voice Assistants (ElevenLabs), Retrieval-Augmented Generation (RAG), Prompt Engineering, Embeddings & Vector Search, Document Data Extraction
Languages & Backend: Python, TypeScript, JavaScript, SQL; Node.js, FastAPI, Flask, Express.js, Elysia (Bun); REST APIs, WebSockets, Microservices, Event-Driven Architecture
Frontend & UI: React, Next.js (SSR / SSG), Responsive Web Design, Core Web Vitals, HTML5 / CSS3
Databases: PostgreSQL, MySQL, MongoDB, DynamoDB, Redis
Cloud & DevOps: AWS (ECS, ALB, EC2, S3, CloudFront, Route 53, HealthLake), SST (IaC), Docker, CI/CD, GitHub, Linux
Integration & Security: SSO (Auth0 / Okta), OAuth 2.0, JWT / token-based auth, RBAC, MFA, HL7 FHIR, HIPAA

Experience

Software Development Engineer Feb. 2024 – Present
Vectorsoft *Hyderabad, India*

- Founding engineer on **CurerTech**, a multi-tenant healthcare platform — owned architecture, frontend, backend APIs, cloud setup, and releases from prototype to production.
- Built the platform's **AI assistant service**: a self-serve chatbot using **retrieval-augmented generation** over product documentation, with answers scoped to each tenant's configuration — deflecting **70%** of support tickets.
- Added a **voice interface** using **ElevenLabs** for natural speech, giving users hands-free product help and guided walkthroughs.
- Automated client onboarding — tenant provisioning, configuration, and data migration over event-driven services — cutting time to go live from **months to 1–6 days** and winning clients from competing platforms.
- Built a **document data-extraction** pipeline turning unstructured clinical documents into validated **HL7 FHIR** records, removing manual data entry from onboarding and daily operations.
- Shipped the responsive customer-facing web application in **Next.js (SSR / SSG)** and **React**, optimizing Core Web Vitals and SEO.
- Integrated enterprise auth via **SSO (Auth0/Okta)** with OAuth 2.0 / JWT, RBAC and MFA; met **HIPAA** requirements with AES-256 encryption, audit logging, and PHI de-identification.
- Built and operate the **AWS** environment (ECS, ALB, EC2, S3, CloudFront, Route 53) with **Docker** and **SST** as infrastructure-as-code at **99.9%** uptime; **Redis** caching cut database load **50%** and held latency under **100ms**.

Freelance Software Engineer Sep. 2023 – Jan. 2024
Self-Employed *Remote*

- Built and deployed the backend for **openstudyai.com**, an AI-driven education platform, on a **Python/Flask** and AWS stack serving a global user base.
- Implemented the **AI tutoring chatbot** — prompt design, conversation context, and streaming responses — plus extraction that parsed uploaded study material into structured topics.
- Ran the product end to end, from wireframes to production; added **Redis** rate limiting and session caching, and cut monthly AWS spend by **20%**.

Education

Vidya Jyothi Institute of Technology Hyderabad, India
Bachelor of Technology in Computer Science; ***CGPA: 7.99*** *Aug. 2019 – Aug. 2023*

Achievements

- Ranked **1st of 400+ participants** in the college-wide CodeKaze coding competition (2023).
- Sustained a 200-day problem-solving streak on **LeetCode**.
