Professional Summary

Software Development Engineer with around 3 years of experience building and operating production systems. Founding engineer at a healthcare-data startup, owning Next.js/React responsive web applications, backend APIs, AWS cloud infrastructure, and healthcare data pipelines end to end.

Skills

Programming Languages: TypeScript, JavaScript, Python, SQL
Frontend & UI: Next.js (SSR / SSG), React, Responsive Web Design, Core Web Vitals, HTML5 / CSS3, State Management
Backend & Frameworks: Node.js, Elysia (Bun), Express.js, FastAPI, Flask
Databases & Caching: PostgreSQL, MongoDB, Redis, MySQL, DynamoDB
Cloud & DevOps: AWS (ECS, ALB, EC2, S3, CloudFront, Route 53), SST (IaC), Docker, CI/CD, Linux
Architecture & Security: REST APIs, WebSockets, Microservices, Event-Driven Architecture, HL7 FHIR, HIPAA

Experience

AI Trainer & LLM Evaluator — Coding Jun. 2026 – Present
Outlier | Independent Contractor *Remote*

- Evaluate AI-generated code for correctness, instruction adherence, and edge-case handling.
- Compare model responses and document technical errors, logical inconsistencies, and solution quality.
- Provide structured technical feedback to support improvements in model-generated programming solutions.

Software Development Engineer Feb. 2024 – Aug. 2026
Vectorsoft *Hyderabad, India*

- Founding engineer — owned end-to-end software architecture, frontend applications, backend APIs, AWS infrastructure, and production deployments.
- Architected and shipped the responsive, high-performance customer-facing web application in **Next.js (SSR / SSG)** and **React**, optimizing Core Web Vitals and SEO while integrating via REST APIs and WebSockets.
- Designed a **multi-tenant** microservices architecture with asynchronous, event-driven message queues to support data consistency across services.
- Designed and implemented the migration from **AWS HealthLake and DynamoDB to MongoDB**, reducing read/write latency while maintaining a **FHIR-aligned data model** to simplify future migrations to FHIR-based systems.
- Architected platform security to support **HIPAA** requirements: TLS encryption in transit, AES-256 encryption at rest, automated audit logging, PHI de-identification, and RBAC with MFA via Auth0/Okta.
- Engineered a **Redis** cache-aside layer for session metadata and hot lookups, cutting primary database load by **50%** and holding API latency under **100ms** through peak traffic.
- Built and operated **AWS** infrastructure (ECS, ALB, EC2, S3, CloudFront, Route 53), using **Docker** for containerization, **SST** for infrastructure as code, and **CI/CD** pipelines for automated deployments.

Freelance Software Engineer Sep. 2023 – Jan. 2024
Self-Employed *Remote*

- Built and deployed the backend for **openstudyai.com**, an AI-driven education platform, on a **Python/Flask** and AWS stack serving a global user base.
- Implemented rate limiting and session caching with **Redis** to keep read-heavy traffic off the primary database.
- Ran the product end to end, from wireframes to production deployment, and cut monthly AWS spend by **20%** through right-sizing and resource cleanup.

Education

Vidya Jyothi Institute of Technology Hyderabad, India
Bachelor of Technology in Computer Science; ***CGPA: 7.99*** *Aug. 2019 – Aug. 2023*

Achievements

- Ranked **1st of 400+ participants** in the college-wide CodeKaze coding competition (2023).
- Sustained a 200-day problem-solving streak on **LeetCode**.
